

SPEEDOMETER function

EN

With this function you can monitor your current speed and direction (shown as a compass) directly on the display. As well as displaying the direction and current speed, the camera will also alert you to upcoming speed cameras. The display shows the speed limit while approaching the speed camera, its distance and will alert you when speeding. The SPEEDOMETER function can be set as a screensaver so that the display is not distracting, for example, when driving at night.

When in recording mode or standby mode, pressing the 'up' button will display information about your current speed, direction and the distance to speed camera (see picture below).

If the driving speed is above the current speed limit, the following will be displayed.

Exceeding the speed limit in the current measured zone warning

Turning off the display

If you want to turn off the display, so that it does not distract you while driving, when in standby more or whilst recording press the "power button". To activate the screen, press any key.

SPEEDOMETER screensaver / turn off display

In the menu you can choose to automatically switch on the speedometer / turn off the display at intervals of 1, 3 and 5 minutes under "Screensaver".
